Research Interests

My research focuses on the intersection of causality and machine learning. I aim to develop a methodology for modeling our world from a causality lens and leverage the shared causal mechanisms across different data environments. To that end, I use the language of *causal interventions* in a broad range of research problems that include but are not limited to unsupervised representation learning, causal structure learning, and sequential intervention design.

Research Experience

RPI Information Sciences Group — *Troy, NY*
RPI-AIRC Scholar, Advisor: Dr. Ali Tajer — January 2020 - Present

Causal Representation Learning via Interventions
- Developed a novel framework for analyzing causal representation learning via score functions under interventions.
- Established identifiability results for various settings, multiple papers are under review process [P1], [P2].

Intervention Design via Causal Bandits
- Designed causal bandit algorithms with relaxed assumptions compared to the prior work. Established lower and upper bound regret guarantees. Published one paper at JMLR [J1].

Scalable Interventional Structure Learning
- Developed consistent algorithms for efficient learning of intervention targets and improving the structure learning of causal graphs.
- Published papers for both causally sufficient (NeurIPS [C2]) and causally insufficient systems (UAI [C3]).

Structure Learning of Undirected Graphical Models
- Developed algorithms for structure learning of shared subgraphs for multiple undirected graphical models, and analyzed sample complexities. Published one paper at AISTATS [C1].
